RTA Design Studio
Integration Platform

Industry's First Automated, Real-Time Enterprise-Wide Risk Monitoring Solution

Gain Real-Time Transparency, Insight & Control Into Your Business Applications

The need to implement real-time business controls across a heterogeneous application landscape is becoming essential in order to achieve compliance objectives, and to provide the business with access risk assurance. Providing the transparency to user access to key business applications, identifying control issues and keeping them in check across multiple systems is a complex challenge for organizations today.

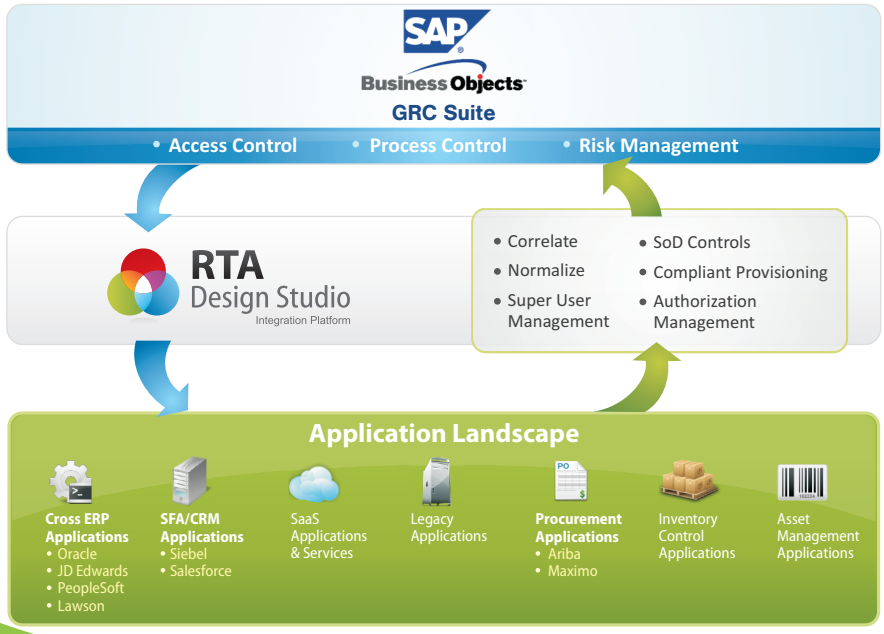
Greenlight® RTA Design Studio® was developed just for this purpose. RTA Design Studio is a real-time integration engine for access risk monitoring and insight analysis. RTA Design Studio provides visibility to user access across the enterprise and enables a consistent approach for applying controls across all applications.

Greenlight RTA Design Studio - the only SAP Endorsed Business Solution For SAP GRC

Greenlight RTA Design Studio is tightly integrated to work with the SAP® BusinessObjects™ Access Control, enabling SAP customers to extend their GRC control framework to other business systems and applications.

For organizations that need segregation of duties **(SoD)** and other policy controls to span across ERP systems, legacy procurement applications and other business systems, RTA Design Studio provides a robust integration platform, along with logic and rules, that provides an enterprise-wide view of your business risk. There is no longer a system or application that can't be included for control coverage.

Expand Enterprise Risk Monitoring across SAP & other Business Systems



Key Benefits

- One consistent, real-time approach that works across multiple business systems (applications, outsourced managed, cloud & legacy)
- Lowers internal cost of control monitoring, testing & reporting involving non-SAP applications by 80% over manual approaches
- Increases the number of applications that can be continuously monitored for policy controls, providing better risk management that enables business assurance
- Embeds compliance monitoring into transactional processes providing a preventative control that eliminates the need for resource intensive sampling
- Lowers the infrastructure complexity & organizational burden of implementing cross-system controls
- Automates & simplifies the resolution process via one, intuitive user interface
- Provides timely, accurate & actionable information

Greenlight TECHNOLOGIES

RTA Design Studio enables monitoring of non-SAP Systems utilizing your existing SAP GRC Solution

RTA Design Studio provides one unified repository for monitoring rules across multiple system types. Greenlight enables one business rule for SoD or transaction monitoring to be applied across multiple systems regardless of the technical or security administration differences.

Correlation & Normalization

RTA Design Studio® automatically correlates and normalizes security models and rules across multiple applications, eliminating complexity, redundant efforts and human error associated with manual extract approaches.

Eliminating Cross System Complexity & Policy Silos

RTA Design Studio provides a centralized framework to design and deploy real-time adapters (RTAs) for business applications, as well as custom developed for third party and legacy systems. This approach eliminates system complexity and provides one repository for business monitoring rules which can be applied to multiple systems to conduct risk analysis across the enterprise.

RTA Design Studio reduces complexity by providing pre-built integration connectors for many critical business applications including SAP®, Oracle®, Ariba®, Lawson™, Hyperion®, and Baan® using RTAs. Customers can easily create their own connectors using the RTA Design Studio security and transaction modeling process to integrate with their homegrown and legacy systems.

Part of the Greenlight Enterprise Business Control Platform℠ - providing Business Assurance

The Greenlight Enterprise Business Control Platform monitors all business applications for access policy control compliance and automates the access risk resolution process as well as monitoring user activities across critical business processes to identify suspicious transactions, human error or omission. The Greenlight Enterprise Business Controls Platform consists of RTA Design Studio® (for enterprise-wide access insight & control), LaserFocus® (for enterprise-wide access risk remediation & mitigation), ResQ® (for super-user access management) and Audit Analytics® (for business process activity monitoring & analysis).

About Greenlight Technologies

Greenlight Technologies provides the industry's most comprehensive, real-time enterprise business control software solution that enables effective governance, risk and compliance management for user access control and transaction activity monitoring across ERP, CRM, cloud-based, outsourced or legacy systems.

Greenlight Technologies enables organizations to monitor risks across applications and within key business processes. Greenlight Technologies also enables organizations to reduce access control complexity and operational overhead associated with the remediation of access policy violations. Leading Global 2000 organizations rely on Greenlight Technologies to provide them with a real-time business control platform to deliver business assurance.

Key Features

- SAP validated, certified & endorsed solution
- Real-time visibility & risk assessment across multiple business systems (fully automated with no manual system extracts)
- Scalable architecture that's proven in large enterprise deployments
- Comprehensive approach that's highly configurable & requires no programming skills
- Industry leading control library
- No additional hardware or software required (resident within SAP GRC and NetWeaver)
- Reporting & dashboards

Greenlight RTA Design Studio Advantage

"After installing Greenlight's RTA Design Studio, we have realized savings of over 80% in time and resources that had been required to run manual batch extractions for our non-SAP systems and applications."

- Elster Group
